

## **Project Description (DWH&DM)**

In this project take any organizational database (OLTP). You can use already built-in database with ERD and other details. You are required to perform the following steps to develop the project:

- Design business questions
- Create Dimension Model (Complete model or different data marts)
- Create Data warehouse
- Perform ETL (Extraction, Transformation and Load) on data warehouse
- Design queries according to the designed business questions. Run these queries and print the results
- Apply any ML techniques on data obtained from data warehouse

Note: You are required to prepare complete report for every task you performed, with complete screen shorts (where applicable). Also include details regarding the database you have selected for development of data warehouse.
